

eOCR Simulator — User Manual

For testers and developers who use the eOCR simulator to send loan packages to ACE the way eOCR does, follow them through ACE, and check what ACE sends back. Screenshots are from the QA environment, 27 September 2026.

1. What the simulator is

eOCR is the client system that sends loan packages to ACE and receives the results (ACE to eOCR Integration Specification v1.1). In QA the real eOCR is not connected, so the **eOCR simulator** plays its part:

The simulator does (as eOCR would)	ACE does (for real)
Puts the loan documents and the control file in the intake S3 folder	Checks the package (pre-check), merges it into one PDF
Calls ACE's onboarding API and gets the ACE job ID (the ADR)	OCR, classification, collation, NOTE validation, extraction
Asks ACE's Status API for progress	Waits for a person to review the loan in ACE
Receives ACE's callback and fetches the result file	Sends exactly one callback when the job ends
Checks every answer against the specification and shows a verdict	—

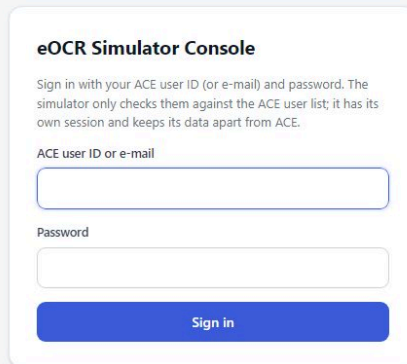

Nothing the console shows about progress is invented: it only records and checks what ACE reported through its Status API, its callback and its result file.

Where it is: <https://d237i8q2c495sn.cloudfront.net/eocr-sim/> (QA). It is an internal test tool; only people with an ACE account can sign in.

Important: reviews are done **in ACE**, not in the simulator. A job that needs a review waits until a reviewer completes it in the ACE application (section 5).

2. Signing in

Open the simulator address and sign in with your **ACE user ID (or e-mail)** and **ACE password**. The simulator keeps its own session: signing in here does not sign you out of ACE.

The screenshot shows a login form titled "eOCR Simulator Console". Below the title is a paragraph of text: "Sign in with your ACE user ID (or e-mail) and password. The simulator only checks them against the ACE user list; it has its own session and keeps its data apart from ACE." Below this text are two input fields: "ACE user ID or e-mail" and "Password". At the bottom of the form is a blue button labeled "Sign in".

Every job records who created, submitted and closed it, so use your own account.

To review loans in ACE (section 5) your ACE account needs a reviewer role (PROCESSOR, SUPERVISOR or ADMIN). An account without any role cannot open the review screen.

3. The console at a glance

3.1 Navigation

The left bar has: **New job**, **Dashboard**, **Jobs**, **Callbacks**, **Report**, **System health**, **Scenario runs** and **How it works** (help). At the bottom it shows the ACE endpoint jobs are sent to, and who is signed in.

3.2 Dashboard

The dashboard is the starting page. The tiles count jobs submitted in the last 24 hours, jobs in progress in ACE, completed and failed jobs, the average time until ACE's callback, jobs that need your attention, and tests passed. Click a tile to see those jobs. Below are **Needs attention** (with the reason for each job), **In progress** and **Recently finished**. Each row has a five-part progress bar: prepared, submitted, in ACE, callback, closed.

3.3 Jobs

Every job, newest first, with its status, progress, where it is now, who submitted it and when, and how long it took. Use the filters (needs attention, in progress, drafts, completed, failed, finished), the search box (loan ID, job ID or ADR), the period and **Only mine**. **Export CSV** downloads the list.

4. Running a job, step by step

This walk-through is a real QA run: the test **Loan data differs from the NOTE**, which ended as ADR-2026-200000000031.

Step 0 — Choose what to test

Click **New job**. The first screen asks *What do you want to test?* Each test prepares its package and states the result ACE should give (the full list is in section 9). Choose **Start from scratch** to use your own loan data and files.

New job

Prepare the package the way eOCR does, then send it to ACE. Your progress is saved at every step.

1 **Loan details**
goes into the control file

2 **Documents**
uploaded to the S3 folder

3 **Control file**
generated, editable

4 **Check S3 folder**
what ACE will read

5 **Submit**
call ACE

What do you want to test?

A test prepares the package for you and states what ACE should do; the job then ends as **test passed** or **test failed**. Or start from scratch.

SHOULD SUCCEED

Happy path

A clean package that contains the NOTE. ACE should complete, validate the NOTE and extract fields.

SHOULD SUCCEED

Classification only

extractionRequired "false"; ACE classifies the documents and validates the NOTE, without extracting fields.

SHOULD SUCCEED

Package in several files

The loan package split over two PDFs. ACE should classify documents in both files.

RESILIENCE

eOCR endpoint down for 2 callbacks

The eOCR callback endpoint answers 503 to ACE's first two callbacks. ACE should retry and deliver on attempt 3.

SHOULD FAIL

Password-protected file

One file needs a password. ACE should stop at pre-check and name it (spec 6.2).

SHOULD FAIL

Corrupt file

One file is not a readable PDF. ACE should stop at pre-check and name it.

SHOULD FAIL

Document missing from the folder

The control file lists ghost.pdf, which was never uploaded. ACE should stop at pre-check and name it.

SHOULD FAIL

Control file for another loan

The control file's loanId differs from the folder and the request. ACE should reject the control file at pre-check.

SHOULD FAIL

Loan data differs from the NOTE

Wrong loan amount and seller loan number. ACE should pause for its NOTE review; when the ACE reviewer confirms the mismatches, ACE ends in VALIDATION_FAILED.

CUSTOM

Start from scratch

Your own loan data and files; set an expected outcome at submit if you like.

Loan details

These values go into the control file's loanInfo. ACE checks them against the NOTE, so a wrong value here is how you test a validation failure.

eOCR Simulator - User Manual · page 5 of 34

Step 1 — Loan details

These are the loan fields eOCR puts in the control file: loan ID, seller loan number, loan amount and borrower last name. The job ID (correlationId) is generated if you leave it empty. **Extract fields from the whole package** sets `extractionRequired` : off means ACE only classifies and validates the NOTE. Fill from the environment's test loan copies a known good loan. For this test the loan amount (1.00) and seller loan number (0000000000) are deliberately wrong.

5. Reviewing the job in ACE

1. the **classification/collation review** (document types and pages) — always;
2. the **NOTE review** — only when the NOTE does not match the control file;
3. the **extraction review** — only when extraction was requested.

Sign in to ACE (<https://d23718q2c495sn.cloudfront.net/>) and search the pipeline for the ADR shown in the simulator. The stage column tells you which review it is waiting for.

NOTE

Chesterfield, [City]

Missouri [State]

January 7, 2026

[Note Date]

223 S Hill St, Fort Scott, KS 66701

[Property Address]

1. BORROWER'S PROMISE TO PAY

In return for a loan in the amount of U.S. **\$164,393.00** (the "Principal") that I have received from **Gershman Investment Corp. D/B/A Gershman Mortgage, a Corporation**

(the "Lender"), I promise to pay the Principal, plus interest, to the order of the Lender. I will make all payments under this Note in U.S. currency in the form of cash, check, money order, or other payment method accepted by Lender. I understand that the Lender may transfer this Note. The Lender or anyone who takes this Note by transfer and who is entitled to receive payments under this Note is called the "Note Holder."

2. INTEREST

Interest will be charged on unpaid Principal until the full amount of the Principal has been paid. I will pay interest at a yearly rate of **6.490 %**. The interest rate required by this Section 2 is the rate I will pay both before and after any default described in Section 6(B) of this Note.

3. PAYMENTS

(A) Time and Place of Payments

I will pay principal and interest by making a payment every month. This amount is called my "Monthly Payment." I will make my Monthly Payment on the **1st** day of each month beginning on **March 1, 2026**. I will make these payments every month until I have paid all of the Principal and interest and any other charges described below that I may owe under this Note. Each Monthly Payment will be applied as of its scheduled due date and will be applied to interest before the Principal. If, on **February 1, 2056**, I still owe amounts under this Note, I will pay those amounts on that date, which is called the "Maturity Date."

I will make my Monthly Payments at **16253 Swingley Ridge Road, Suite 200**
Chesterfield, MO 63017

or at a different place if required by the Note Holder.

(B) Amount of Monthly Payments

My Monthly Payment will be in the amount of U.S. **\$1,037.99**. This payment amount does not include any property taxes, insurance, or other charges that I may be required to pay each month.

Check(s) 7,8,9

A **Fail** ends the job as **VALIDATION_FAILED** (2000). A **Pass** continues with extraction (if requested) or ends the job as **COMPLETED** (0).

The screenshot displays the eOCR Simulator interface. The top bar shows the pipeline ID 'ADR-2026-200000000031.pdf' and the status 'NOTE validation - Waiting for review'. The main document area on the left shows a 'NOTE' document with the following details:

- January 7, 2026** [Note Date]
- NOTE** [City]
- LOAN #: 10579082** MIN: 1000630-0000223967-3
- Missouri** [State]
- 223 S Hill St, Fort Scott, KS 66701** [Property Address]

The document text includes sections for 'BORROWER'S PROMISE TO PAY', 'INTEREST', and 'PAYMENTS'. The 'PAYMENTS' section specifies a monthly payment of \$1,037.99 starting on March 1, 2026.

On the right, the 'Buckets' panel shows the error 'NOTE validation failed - Seller Loan Number Mismatch, Loan Amount Mismatch'. Below this, a list of extracted items is shown:

- Income** (3 docs | 3 pages):
 - Paystub 4
 - Paystub 5
 - Paystub 6
- Assets** (1 doc | 3 pages):
 - Check(s) 7, 8, 9
- Liabilities** (1 doc | 1 page):
 - VOM/VOR 18
- Closing** (1 doc | 3 pages)

6. Reading the result

Back in the simulator, the job closes as soon as ACE's callback arrives. The test card shows **Test passed** or **Test failed** with every check; an expected failure is marked **As expected**.

Submitted Sep 27, 05:55:05 PM by eOCR Tester (eocr.testers)

Took 10 min

ACE https://newrez-ace-qa-integration-06a7e9cf35c632320.7d67968.vpc-lattice-svcs.us-east-1.on.aws

✓

Test passed: Loan data differs from the NOTE

Everything the test expected happened.

Check	Expected	Actual	
Outcome	2000 VALIDATION_FAILED	2000 VALIDATION_FAILED	✓
NOTE validation	FAILED	FAILED	✓
ACE's description mentions	Loan Amount	Seller Loan Number Mismatch, Loan Amount Mismatch.	✓
ACE's description mentions	Seller Loan Number	Seller Loan Number Mismatch, Loan Amount Mismatch.	✓
ACE followed the spec	no deviations or validation findings	none	✓

🕒

As expected — NOTE validation failed: Seller Loan Number, Loan Amount

Failed at: Validation

Seller Loan Number Mismatch, Loan Amount Mismatch.

What	Problem	How to fix it
Seller Loan Number	control file says '0000000000'; ACE found a different value	If '0000000000' is wrong, correct sellerLoanNumber in the control file; if it is right, the NOTE needs review.
Loan Amount	control file says '1.00'; ACE found a different value	If '1.00' is wrong, correct loanAmount in the control file; if it is right, the NOTE needs review.

What to do next

1. Nothing to do: this failure is what the test expected.

Resubmit as new job

Copy the failure summary

The **Validation** tab compares every loan field: the control-file value, the value ACE found, the simulator's own comparison, ACE's verdict and the reviewer's decision.

7. The job page in detail

Every job page has three parts: the **status panel** (what is happening or what went wrong, and what to do next, with one-click actions), **Where the job is** (the stage track), and the tabs. The examples below are a completed job with extraction (ADR-2026-200000000025).

Tab	Shows
Overview	what was sent (loan data, documents, control file) and what came back (outcome, documents classified, fields extracted, validation, spec checks)
Files in S3	the input folder (what ACE read), ACE's output folder and the simulator's own records, with size, time, view and download
Result	the outcome and the result file (Response.json): every document ACE found with its type, pages and extracted fields
Validation	NOTE validation per field and the document checks
Callbacks	every callback delivery attempt for this job
ACE exchanges	every call to ACE (onboarding, status polls) with request, response and time
Spec compliance	the specification checklist: passed, failed (with the deviation), not applicable, pending
Activity	ACE's status history and the job's timeline (who did what, when)

Spec compliance

ACE to eOCR Integration Specification v1.1, clause by clause. 3.1 and 3.2 are eOCR's side.

Spec	Check	Result
3.1	Package staged as loanId=<loanId>/correlationId=<execution>/ with the control file and documents	passed
3.2	Control file: loanInfo (loanId, correlationId, sellerLoanNumber, loanAmount, borrowerLastName), extractionRequired "true"/"false", documents with fileName and contentType	passed
4, 4.2	Onboarding accepted: HTTP 202, application/json, exactly (ace/jobId, status 202 ACCEPTED)	passed
7.1-7.4, mapping	Status API: exact fields, workflow stage/state, numeric code matching value, batchPath / failedDocuments per code, ISO 8601 UTC timestamp, application/json	passed
7	Status progresses without going back or changing a terminal outcome, and knows the job	passed
5	Terminal callback delivered to the eOCR endpoint	passed
5.1, 5.2, 6.1-6.3	Callback payload: flat fields, numeric terminal code matching value, batchPath / failedDocuments rules, ISO 8601 UTC timestamp, application/json	passed
5, 7	Callback agrees with the Status API (status, batchPath, failedDocuments)	passed
3.3 step 7, 6.4, 6.5	*Response.json retrieved: one per batch, exact schema, Documents items, pageRange and confidence by page, extraction rules, validationStatus	passed
6.3, 6.5, 3.2	NOTE validation and document results consistent with the control file and the package	passed

status

Evidence (top right of every job) downloads one zip with a summary, the control file, the records, the callbacks, the exchange log and ACE's output — attach it to a defect or a sign-off.

8. When a job fails

The status panel says what failed, where, and how to fix it.

Pre-check failed (1000). ACE refused one or more documents before processing. Each document is listed with the reason (for example *Password Protected*, *Corrupted Document*). Fix or replace the file and use **Resubmit as new job**, which copies the package into a new job and opens it at the Documents step.

Seller Loan Number Mismatch, Loan Amount Mismatch.

What	Problem	How to fix it
Seller Loan Number	control file says '0000000000'; ACE found a different value	If '0000000000' is wrong, correct sellerLoanNumber in the control file; if it is right, the NOTE needs review.
Loan Amount	control file says '1.00'; ACE found a different value	If '1.00' is wrong, correct loanAmount in the control file; if it is right, the NOTE needs review.

What to do next

1. Correct the loan data and resubmit as a new job, or confirm the NOTE is the wrong document.

2. The result file lists the documents ACE classified; it has no extracted fields (spec 6.5).

Resubmit as new job

NOTE validation

FAILED

the control file against what ACE read on the NOTE

eOCR Simulator - User Manual · page 28 of 34

Outcome	Code	What it means	What to do
COMPLETED	0	ACE finished; the result file has the documents (and fields, if requested)	nothing
PRECHECK_FAILED	1000	a document or the control file was refused before processing	fix the named files, resubmit
VALIDATION_FAILED	2000	the NOTE does not match the control-file loan data (confirmed by the reviewer)	correct the data, resubmit
PROCESSING_FAILED	3000	ACE could not finish (a step failed after all retries)	resubmit; if it repeats, report it with the Evidence zip
Refused by ACE	—	ACE rejected the onboarding request itself	read the message on the job page, fix, Fix and submit again

9. Tests you can run

Test	What it does	ACE should end with
Happy path	a clean package with the NOTE, extraction requested	0, NOTE PASSED, fields extracted
Classification only	<code>extractionRequired</code> false	0, no extracted fields
Package in several files	the package split over two PDFs	0, NOTE PASSED
eOCR endpoint down for 2 callbacks	the simulator refuses ACE's first two callbacks	0, delivered on attempt 3
Password-protected file	one file needs a password	1000, <i>locked.pdf</i> — <i>Password Protected</i>
Corrupt file	one file is not a readable PDF	1000, <i>broken.pdf</i> — <i>Corrupted</i>
Document missing from the folder	the control file lists a file that was never uploaded	1000, <i>ghost.pdf</i>
Control file for another loan	the control file's loan ID differs	1000, <i>Loan ID Mismatch</i>
Loan data differs from the NOTE	wrong loan amount and seller loan number	2000 after the reviewer confirms the mismatch

Every test except the pre-check ones waits for reviews in ACE (section 5) before it can finish.

10. Other pages

Callbacks — every callback the simulator received from ACE, for all jobs (including unknown job IDs), with the answer given, the checks and the payload. Use the filters to find refused or off-spec deliveries.

Spec coverage

every clause of the integration spec, across the jobs submitted in the period

Spec	Check	Passed	Failed	Pending		Status
3.1	Package staged as loanId= <loanId>/correlationId= <execution>/ with the control file and documents	21	0	0		covered
3.2	Control file: loanInfo (loanId, correlationId, sellerLoanNumber, loanAmount, borrowerLastName), extractionRequired "true"/"false", documents with fileName and contentType	21	0	0		covered
3.3 step 7, 6.4, 6.5	*Response.json retrieved: one per batch, exact schema, Documents items, pageRange and confidence by page, extraction rules, validationStatus	13	0	1		covered
4, 4.2	Onboarding accepted: HTTP 202, application/json, exactly (aceJobId, status 202 ACCEPTED)	21	0	0		covered
5	Terminal callback delivered to the eOCR endpoint	20	0	1		covered
5, 7	Callback agrees with the Status API (status, batchPath, failedDocuments)	20	0	0		covered
5.1, 5.2,	Callback payload: flat fields, numeric terminal code matching value, batchPath /	20	0	1		covered

System health — checks that the callback endpoint, ACE's Status API, the job store, the S3 buckets and the tracker work, with the configuration in use.

eOCR Simulator - User Manual · page 32 of 34

How it works — a short explanation of the terms used in the console.

11. Running tests from the command line

`tools/lifecycle_check.py` in the simulator repository runs a whole test, including the reviews in ACE, without the browser:

```
set ACE_TEST_USER=<an ACE account with a reviewer role that nobody else is using>
set ACE_TEST_PASSWORD=<its password>
python tools/lifecycle_check.py happy          (or: noextract, validation, notepass, precheck)
python tools/lifecycle_check.py resume <jobId> <ADR> <test>
```

12. Troubleshooting

Problem	Why	What to do
The job stays at <i>Waiting for a HITL review</i>	a review is waiting in ACE	open the ADR in ACE and complete the review (section 5)
ACE's review screen shows no panel or does not load	your ACE account has no role	ask an administrator to give the account a reviewer role

Problem	Why	What to do
ACE signs you out, or actions answer <i>not authorised</i>	the same ACE account signed in somewhere else (ACE keeps one session per user)	use your own account; do not share test accounts between people or scripts
<i>No callback</i> flag on a job	ACE finished but the callback did not arrive in time	open the job and use Close.... : it reads the outcome from ACE's Status API and fetches the result
<i>No change 24h+</i> flag	nothing has moved for a day	check whether a review is waiting in ACE; otherwise report it with the Evidence zip
Sign-in to the simulator fails	wrong ACE user ID/password, or the account is not Active	check the account in ACE
Submit is refused by ACE	the request or control file is not acceptable	read the message on the job page, fix, Fix and submit again

13. Terms

Term	Meaning
Job (correlationId)	one eOCR submission of a loan package
ADR (aceJobId)	ACE's reference for the job, e.g. ADR-2026-200000000031; the same number in ACE, the callback and the result
Control file	the JSON file eOCR puts next to the documents: loan data, <code>extractionRequired</code> , the list of documents
batchPath	where ACE should read the package: the control file or its folder
Callback	ACE's message to eOCR when the job has ended, with the outcome code
Response.json	the result file: documents found, pages, confidence and extracted fields
HITL	human in the loop: a review by a person in ACE
NOTE validation	comparing the loan data in the control file with the NOTE; two of three fields must match
